

# ABSTRACT OF THE DISCLOSURE

A polymeric fluorescent substance exhibiting fluorescence in solid state. The substance has a polystyrene reduced number-average molecular weight of  $5 \times 10^4$  to  $1 \times 10^8$ , and contains repeating units represented by formula (1) and formula (3):

The polymeric fluorescent substance exhibits particularly strong fluorescence, and a high performance polymer LED which can be driven at low voltage and high efficiency is obtained.
